PROFESSIONAL SUMMARY

DevOps and Infrastructure Engineer with 9+ years spanning ISP network operations, enterprise systems engineering, and cloud-native platform delivery. Currently accountable for the production infrastructure behind a national video-conferencing platform and government contact-centre services on Oracle Cloud Infrastructure — containerised with Docker, released through Jenkins and GitLab CI/CD with SonarQube and Trivy gates, and observed end to end with Prometheus, Grafana, Zabbix and Sentry. Equally at home designing a Cloudflare edge delivery path, bootstrapping and recovering a synchronous Galera cluster, or tracing a dropped video stream down to a firewall inspection policy. CCNA-certified with production BGP, OSPF and IPsec experience, so I can own a service from the network layer up through the deployment pipeline.

CORE TECHNICAL SKILLS

Cloud & Platform	Oracle Cloud Infrastructure (OCI), Cloudflare (Workers, R2, D1, Durable Objects, Load Balancer, Tunnel, DNS), AWS EC2, VMware ESXi, bare-metal provisioning
Containers	Docker, Docker Compose, multi-stage image builds, private registries (Harbor), Kubernetes (CKA training)
CI/CD & Automation	Jenkins, GitLab CI, Git, Ansible, ArgoCD, SonarQube quality gates, Trivy image scanning, Bash, Python, Wrangler
Observability	Prometheus, Grafana, Zabbix, Coroot, Sentry, Nagios, Cacti — metrics, alerting, dashboards, log-driven RCA
Databases & HA	Percona XtraDB Cluster (Galera), MySQL, ProxySQL, HAProxy, PostgreSQL, MongoDB — clustering, backup and restore, SST recovery, tuning
Web, Proxy & Delivery	NGINX (reverse proxy, load balancing, TLS termination, CORS), Apache, TLS/SSL lifecycle, DNS, CDN and HLS delivery
Networking	TCP/IP, VLSM and subnetting, VLANs, STP, BGP, OSPF, EIGRP, IPsec VPN, NAT, ACLs; Cisco, Juniper, MikroTik, FortiGate; ISP / IIG / GGC integration
Operating Systems	Ubuntu, CentOS, RHEL, Windows Server — hardening, patching, systemd, backup and disaster recovery
Real-Time Media	Jitsi Meet, Jibri recording, Owncast, HLS packaging and authenticated segment delivery

PROFESSIONAL EXPERIENCE

DevOps Engineer Synesis IT PLC	Aug 2023 – Present
- Own production deployment and day-two operations for the Conway video-conferencing platform and the national 333 and DIP contact-centre services, keeping them available to a large public user base across government and enterprise tenants. - Engineer and operate multi-tier Java and React workloads on Oracle Cloud Infrastructure — compute, block and object storage, VCN networking, and continuous right-sizing of running resources to control spend. - Design and maintain Jenkins and GitLab CI/CD pipelines with SonarQube quality gates and Trivy image scanning, replacing manual release steps with repeatable, self-service deployments for development teams. - Containerise services with Docker and Docker Compose and front them with NGINX for reverse proxying, TLS termination, load balancing, and correct CORS and header behaviour. - Run the observability stack — Prometheus, Grafana, Zabbix, Coroot and Sentry — so capacity pressure and application errors surface and are actioned before users report them. - Automate operational toil in Bash and Python — scheduled health checks and Google Sheets-driven configuration pipelines — including a TLS expiry tracker built from 153 production DNS records that replaced manual certificate checks. - Operate MySQL and Percona XtraDB Cluster behind HAProxy and ProxySQL, including backup, restore, and disaster-recovery exercises validated against real failure scenarios.	
Senior System Engineer (Assistant Manager) Synesis IT PLC	Sep 2021 – Sep 2023
- Designed and implemented scalable, secure server and system architectures for production workloads across on-premise data centre and cloud estates. - Oversaw a 50+ server mixed estate — Linux, Windows, VMware virtualisation, load balancers, and AWS EC2 — sustaining 99.9% service availability through Zabbix and Nagios monitoring plus automated remediation. - Led hardware, operating-system, and network incident troubleshooting for data-centre infrastructure; introduced platform tooling that raised performance and removed recurring manual operations.	
IT Infrastructure Engineer Synesis IT PLC	Aug 2020 – Aug 2021
- Decomposed monolithic applications into Docker-containerised services and deployed them to development, staging, and production using Git, Jenkins, and Ansible. - Built the organisation's first CI/CD release flows for staging and production, along with the NGINX configurations fronting them. - Installed, hardened, patched, and troubleshot Red Hat, CentOS, Ubuntu, and Windows Server systems and their applications, including Asterisk, DNS, Cacti, Zabbix, ticketing, and inventory services.	
Network Engineer Biometrics BD Ltd. — Juniper Networks Partner	Mar 2019 – Nov 2019

- Designed, implemented, and maintained Juniper-based enterprise networks for large-scale public-sector and enterprise clients — including core network upgrade design for Chittagong Port Authority on Juniper SRX and EX series, and a Bangladesh Army network upgrade on Juniper MX and SRX.
- Configured and supported BGP, OSPF, and IPsec VPN site-to-site connectivity, including a Juniper MX-104 to Cisco IPsec tunnel and a Dhaka-to-India FortiGate tunnel for an industrial group.
- Rolled out and configured MikroTik access points across 10 sites for Chittagong Port Authority.

Engineer, Network Operations Centre | Earth Telecommunications (Pvt.) Ltd. — IIG Operator May 2017 – Feb 2019

- Monitored network alarms around the clock and resolved faults within SLA across fibre-optic and wireless network segments.
- Configured, tuned, and rolled out Cisco, Juniper, and MikroTik routers and switches; integrated and administered IIG, ISP, and Google Global Cache (GGC) networks.
- Implemented the company's 10G network upgrade project, planned equipment layout for a new data centre, and executed a full data-centre relocation to that facility.

KEY PROJECTS & ENGINEERING HIGHLIGHTS

Cloudflare Edge HLS Live-Streaming Platform

Cloudflare Workers · R2 · D1 · Durable Objects · Load Balancer · Owncast · Wrangler

Built a token-authenticated HLS delivery path for live and on-demand video: an R2 origin with scoped API tokens and explicit CORS and cache rules, a Workers read-through CDN issuing and validating per-segment tokens, a steered Load Balancer in front of an Owncast origin, and per-viewer bandwidth metering in D1 backed by Durable Objects. Tuned cache semantics separately for short-TTL live manifests and immutable segments, and brought dashboard-deployed Workers back under source control with Wrangler versioning and rollback.

Three-Node Percona XtraDB Cluster — Build, Hardening & Disaster Recovery

Percona XtraDB Cluster 8.0 (Galera) · HAProxy · Ubuntu 22.04 · systemd · UFW

Bootstrapped a three-node synchronous MySQL cluster to remove a single database point of failure, fronted by HAProxy in single-writer mode with clustercheck health endpoints and firewall rules scoping replication ports to the cluster subnet. Rebuilt the packaging and systemd layer on partially purged hosts, then recovered the cluster from three serious production incidents — a full-cluster power failure resolved through wsrep-recover, a disk-full state snapshot transfer failure, and a schema restore that overwrote internal SST accounts — and authored the runbook the team now works from.

Ansible Automation for Jitsi Meet Conferencing Deployments

Ansible · Python · Google Sheets API · Oracle Cloud Infrastructure · Ubuntu

Replaced manual multi-VM Jitsi Meet build-outs with a nine-playbook Ansible pipeline driven by a Python configuration engine that reads deployment parameters straight from Google Sheets, turning a multi-day hand-built deployment into a repeatable run. Presented the design and operating model to an external client audience in a 45-slide technical walkthrough.

Secure CI/CD Pipeline for a Spring Boot API Gateway

Jenkins · Harbor · SonarQube · Trivy · Docker Compose · Maven

Built and demonstrated a nine-stage Jenkins pipeline — build, test, SonarQube quality gate, image build, Trivy vulnerability scan, private registry push, deploy — for a Spring Boot API gateway serving a public-sector client. Resolved Maven plugin resolution failures, SonarQube unreachability from containerised build agents, webhook misconfiguration, and workspace permission errors; the scan surfaced genuine CVEs and a hardcoded credential escalated for immediate rotation.

Conference Recording Fleet & Edge Delivery Troubleshooting

Jibri · Docker · NGINX · FortiGate · Cloudflare Tunnel · DNS

Operated a four-container Jibri recording fleet and restored it after an outage traced to an outdated CA bundle in the container image failing to trust a newly issued TLS root, resolved by bind-mounting the host trust store. Isolated intermittent video playback failures on an education platform to FortiGate WAN inspection dropping media responses — proven through NGINX access-log correlation — and specified a Cloudflare Tunnel path to bypass inbound inspection.

CERTIFICATIONS

- **CCNA — Cisco Certified Network Associate, Routing & Switching** · Cisco Systems · January 2019 · ID CSC013400963
- **JNCIA-Junos — Juniper Networks Certified Associate**, Enterprise Routing and Switching
- **NSE 1 & NSE 2 — Network Security Associate** · Fortinet · April 2020
- **AWS Cloud Practitioner Essentials** · Amazon Web Services · May 2025

PROFESSIONAL TRAINING & COURSE COMPLETION

- **CKA, DevOps Engineer & Docker Certified Associate** training programmes · Linux Pathshala, 2022
- **Prometheus (PCA), ArgoCD, Jenkins, Docker & Shell Scripting** · course completion, 2023 · AWS Running on Cloud · Page Cloud Academy, 2023
- **Cisco Networking Academy** · full CCNA R&S track, four courses (2018) · Introduction to Cybersecurity (2020)

EDUCATION

B.Sc. in Electronic & Telecommunication Engineering — University of Liberal Arts Bangladesh (ULAB), Dhaka

Higher Secondary Certificate — Science — Ideal College, Dhaka

Secondary School Certificate — Science — Motijheel Model High School & College, Dhaka
